from Eifel Volcano.

In the neighborhood of the extinct

Eifel volcano, near the Rhine, in Germany, says Chamberg's Journal, are found springs of mineral waters which give off large volumes of natural carbonic acid This natural gas becomes thoroughly

purified in passing up through some two

or three hundred feet of water, which, of course, means a considerable pressure This gas, being duly collected on the surface, is subjected by means of pumps to the pressure of 500 or 600 pounds per source inch, condensing it into a clear, transparent liquid, which is forthwith stored in steel or wrought from cylinders of special construction and exceptional
